## *The Manifesto*

TerrestriaX is a web3 lifestyle brand that is at the intersection of culture, technology, and community. It is a sub-branch collection of Terrestria.

The collection of 8800 Brute BIC-mals savaging the badlands of SOL on the planet BIC-III was hand-drawn by Bictory Finance's in-house designers. Consisting of 11 different 3D animals, the collection captures a subset of creatures, similar to animals on earth, some extinct, heroically contributing and antagonistically impeding the salvation of the planet at the verge of another apocalyptic purge.

The apocalyptic mad-max themed all-unique characters are the multi-chain evolution of the collection on Solana, initially launched on another budding blockchain. TerrestriaX aims to creatively imprint on the blocks of time the monument of extinct animals as well as the some other subtly significant and cute aquatic, arboreal and terrestrial animals of earth.

It's the first collection built inclusively with an ecosystem of Web3 products, to harness utility across a range of products including a centralized exchange, NFT marketplace and Naming service across chains.
